Drug name

Brafix

Drug Uses

Brafix is an all natural, breast enlargement pill which stimulates your pituitary gland, the body's major hormone regulator, to reactivate your body's natural growth hormones. Benefits:

- development and maintenance of breast size;
- enhanced breast shapes;
- regenerated natural breast growth;
- palpable tightness and firmness.

How Taken

2 pills twice a day or as recommended by your Healthcare Professional.

Drug Class and Mechanism

Early in adolescence, the women brain begins secreting regular bursts of hormones that stimulate the body to lay down fat deposits in the breasts. That adipose tissue is suspended in a gelatinous matrix of connective fibers that extend from the muscle of the chest to the underside of the breast skin. Connective tissue can stretch and stretch, to accommodate as much fat as the body inserts between its fibers; the connective tissue's spring gives the breast it's bounce. Brafix stimulates your body to re-release hormones which in turn cause an accumulation of fatty breast tissue. Our medication does not cause gain in general body weight!

Missed Dose

If you miss a dose of Brafix, skip the missed dose. Go back to your regular dosing schedule. Do not take 2 doses at once.

Storage

Store Brafix at 77 degrees F (25 degrees C). Brief storage between 59 and 86 degrees F (15 and 30 degrees C) is permitted. Store away from heat, moisture, and light. Do not store in the bathroom. Keep Brafix out of the reach of children and away from pets.

Warnings Precautions

Himplasia should be used with caution in patients with hypertension.

Possible Side Effects

Brafix is not known to have any side effects if taken as per the prescribed dosage.

More Information

These breast enlargement pills can help to encourage a balance of your hormones while at the same time stimulating breast growth. In this way you can look and feel better as your body is more balanced and as you develop larger breasts.
